Profile

Web developer experienced in building client websites, from gathering requirements and designing layouts to developing custom WordPress themes and handing over completed websites. Uses automation and AI-assisted development to streamline workflows and improve efficiency. Combines practical development experience with client communication, structured planning, independent problem-solving and continuous technical learning.

Technical Skills

- **Web development**: Astro, WordPress, HTML, CSS, JavaScript, HTMX
- **Programming**: Python, Go, TypeScript
- **Development tools**: Git, GitHub Actions, Podman, Mise, Just, Zed, Vim
- **Practices**: CI/CD, test-driven development (TDD), AI-assisted development
- **Design**: Penpot, Figma

Key Skills

- **Client communication and requirements gathering**: Lead client meetings, clarify requirements through targeted questions, explain proposed changes and agree on next steps.
- **Planning and organisation**: Turn ideas into specifications, define scope, break work into tasks and manage commitments using a calendar and task list.
- **Teamwork and coordination**: Structure college group work, delegate tasks, maintain focus and support others when they lead.
- **Technical problem-solving**: Investigate unfamiliar issues using documentation, assess solutions and understand problems before making changes.
- **Quality assurance and version control**: Review AI-generated code, check test results and use Git to track, revise and revert changes.
- **Communication and knowledge sharing**: Explain programming and AI concepts, deliver talks and readings, and teach clients to manage their websites independently.

Voluntary Experience

- Engage with members of the public, communicating clearly with people I have not met before.
- Prepare and deliver short talks and readings to an audience every few months.
- Adapt explanations to different audiences and develop confidence in public speaking.

Work Experience

Freelance Web Developer — Captain Cycles

Sheffield | January–May 2026

- Collaborated with the client to translate their requirements into a website design using Penpot.
- Developed a custom WordPress theme locally and deployed the website through Bluehost.
- Demonstrated how to manage content and independently edit the website's design and layout.
- Created a website showcasing services and pricing to help potential customers discover the business and make enquiries.

Freelance Web Developer — CT Productions

Sheffield | February–June 2026

- Designed and developed a custom WordPress website based on the client's requirements.
- Used Penpot to plan the layout, then deployed the website through Bluehost.
- Guided the client through managing content and making future website changes.
- Presented the business's services online, giving potential customers another way to find out more.

Web Development Work Experience — If Collective

June 2025 | Four days

- Worked on two real client website projects, translating designs into working HTML and CSS.
- Learned to use Figma Dev Mode and apply design specifications during the first two and a half days.
- Contributed to a more complex website during the final day and a half, working with animations and gradients.

Education

T Level Technical Qualification in Digital Software Development (Level 3)

The Sheffield College | September 2026–Present

- Developing skills in programming, software design, development and testing.
- Studying business theory, including how organisations operate and how technology supports business objectives.

Certifications

- Cisco — Python Essentials (In progress)
